

White Paper

Containerized Applications – A Way to Fast IT?

Digitalization requires Fast IT with development and operations going hand in hand. In order to make the idea of DevOps, micro-services and containerized applications a reality, infrastructures and management capabilities are needed that provide the speed and agility which are decisive for the success of the business.

Content	
IT challenges continue to grow	2
A history of applications	2
The new trend: Micro-services	2
Micro-services – A driver for DevOps	2
But what does reality often look like?	3
A possible answer: Virtual Machines	3
Containers	3
Micro-services and containers: Challenges	4
Container deployment	4
Automated failover	5
Automated scaling	5
Automated load-balancing	5
Storing container data	6
What about security?	6
Combine virtual machines and containers	6
Container eco-system and its analogy	7
Building an infrastructure is complex	7
FUJITSU Integrated System PRIMEFLEX	8
Fujitsu’s engagement in container technology	8
Summary	9
